
Project Profiles - Hygiene Coatings

Guardian's Hygiene Coatings have been used in areas where hygiene is a consideration – protection against the growth of mould, bacteria and other harmful micro organisms. We are able to design products to meet specifications that may involve temperature and surface issues.

Our water based coatings are designed to protect against leaching and are suitable where stringent hygiene controls must be observed.

Our coatings are suited to a variety of hygiene areas including:

- Schools
- Hospitals
- Hotels
- Catering establishments
- Breweries
- Food storage
- Sport centres
- Dairies
- Care homes
- Kitchens
- Bathrooms

Project Profiles - Hygiene Coatings

TOOHEYS BREWERY - NSW
APPLICATION OF GUARDIAN SOLVENT
FREE EPOXY - COOLROOM SURFACES

The challenge was to design a coating suitable for very low temperatures in a moist environment. The internal application meant that odour was an issue so we designed a solvent free coating.

The photographs below are a before and after view of the coated insulation panels within the Toohey's Brewery.
